 SMARC EVAL-CARRIER-2.1 - USER GUIDE

Disclaimer

Kontron would like to point out that the information contained in this manual may be subject to alteration, particularly as a result of the constant upgrading of Kontron products. This document does not entail any guarantee on the part of Kontron with respect to technical processes described in the manual or any product characteristics set out in the manual. Kontron assumes no responsibility or liability for the use of the described product(s), conveys no license or title under any patent, copyright or mask work rights to these products and makes no representations or warranties that these products are free from patent, copyright or mask work right infringement unless otherwise specified. Applications that are described in this manual are for illustration purposes only. Kontron makes no representation or warranty that such application will be suitable for the specified use without further testing or modification. Kontron expressly informs the user that this manual only contains a general description of processes and instructions which may not be applicable in every individual case. In cases of doubt, please contact Kontron.

Intended Use

THIS DEVICE AND ASSOCIATED SOFTWARE ARE NOT DESIGNED, MANUFACTURED OR INTENDED FOR USE OR RESALE FOR THE OPERATION OF NUCLEAR FACILITIES, THE NAVIGATION, CONTROL OR COMMUNICATION SYSTEMS FOR AIRCRAFT OR OTHER TRANSPORTATION, AIR TRAFFIC CONTROL, LIFE SUPPORT OR LIFE SUSTAINING APPLICATIONS, WEAPONS SYSTEMS, OR ANY OTHER APPLICATION IN A HAZARDOUS ENVIRONMENT, OR REQUIRING FAIL-SAFE PERFORMANCE, OR IN WHICH THE FAILURE OF PRODUCTS COULD LEAD DIRECTLY TO DEATH, PERSONAL INJURY, OR SEVERE PHYSICAL OR ENVIRONMENTAL DAMAGE (COLLECTIVELY, "HIGH RISK APPLICATIONS").

You understand and agree that your use of Kontron devices as a component in High Risk Applications is entirely at your risk. To minimize the risks associated with your products and applications, you should provide adequate design and operating safeguards. You are solely responsible for compliance with all legal, regulatory, safety, and security related requirements concerning your products. You are responsible to ensure that your systems (and any Kontron hardware or software components incorporated in your systems) meet all applicable requirements. Unless otherwise stated in the product documentation, the Kontron device is not provided with error-tolerance capabilities and cannot therefore be deemed as being engineered, manufactured or setup to be compliant for implementation or for resale as device in High Risk Applications. All application and safety related information in this document (including application descriptions, suggested safety measures, suggested Kontron products, and other materials) is provided for reference only.

CAUTION

Handling and operation of the product is permitted only for trained personnel within a work place that is access controlled. Please follow the "General Safety Instructions" supplied with the system.

NOTICE

You find the most recent version of the "General Safety Instructions" online in the download area of this product.

Revision History

Revision	Brief Description of Changes	Date of Issue	Author
0.1	Initial Draft from SMARC Evalcarrier 2 User Guide	2023-March-08	uma
0.2	Updated with remarks from development	2023-June-16	uma

Terms and Conditions

Kontron warrants products in accordance with defined regional warranty periods. For more information about warranty compliance and conformity, and the warranty period in your region, visit <http://www.kontron.com/terms-and-conditions>.

Kontron sells products worldwide and declares regional General Terms & Conditions of Sale, and Purchase Order Terms & Conditions. Visit <http://www.kontron.com/terms-and-conditions>.

For contact information, refer to the corporate offices contact information on the last page of this user guide or visit our website [CONTACT US](#).

Customer Support

Find Kontron contacts by visiting: <https://www.kontron.de/support-and-services>.

Customer Service

As a trusted technology innovator and global solutions provider, Kontron extends its embedded market strengths into a services portfolio allowing companies to break the barriers of traditional product lifecycles. Proven product expertise coupled with collaborative and highly-experienced support enables Kontron to provide exceptional peace of mind to build and maintain successful products.

For more details on Kontron's service offerings such as: enhanced repair services, extended warranty, Kontron training academy, and more visit <http://www.kontron.com/support-and-services/services>.

Customer Comments

If you have any difficulties using this user guide, discover an error, or just want to provide some feedback, contact [Kontron support](#). Detail any errors you find. We will correct the errors or problems as soon as possible and post the revised user guide on our website.

Symbols

The following symbols may be used in this manual

⚠ DANGER	DANGER indicates a hazardous situation which, if not avoided, will result in death or serious injury.
⚠ WARNING	WARNING indicates a hazardous situation which, if not avoided, could result in death or serious injury.
NOTICE	NOTICE indicates a property damage message.
⚠ CAUTION	CAUTION indicates a hazardous situation which, if not avoided, may result in minor or moderate injury.
	<p>Electric Shock!</p> <p>This symbol and title warn of hazards due to electrical shocks (> 60 V) when touching products or parts of products. Failure to observe the precautions indicated and/or prescribed by the law may endanger your life/health and/or result in damage to your material.</p>
	<p>ESD Sensitive Device!</p> <p>This symbol and title inform that the electronic boards and their components are sensitive to static electricity. Care must therefore be taken during all handling operations and inspections of this product in order to ensure product integrity at all times.</p>
	<p>HOT Surface!</p> <p>Do NOT touch! Allow to cool before servicing.</p>
	<p>Laser!</p> <p>This symbol inform of the risk of exposure to laser beam and light emitting devices (LEDs) from an electrical device. Eye protection per manufacturer notice shall review before servicing.</p>
	<p>This symbol indicates general information about the product and the user guide.</p> <p>This symbol also indicates detail information about the specific product configuration.</p>
	<p>This symbol precedes helpful hints and tips for daily use.</p>

For Your Safety

Your new Kontron product was developed and tested carefully to provide all features necessary to ensure its compliance with electrical safety requirements. It was also designed for a long fault-free life. However, the life expectancy of your product can be drastically reduced by improper treatment during unpacking and installation. Therefore, in the interest of your own safety and of the correct operation of your new Kontron product, you are requested to conform with the following guidelines.

High Voltage Safety Instructions

As a precaution and in case of danger, the power connector must be easily accessible. The power connector is the product's main disconnect device.

⚠ CAUTION

Warning

All operations on this product must be carried out by sufficiently skilled personnel only.

⚠ CAUTION

Electric Shock!

Before installing a non hot-swappable Kontron product into a system always ensure that your mains power is switched off. This also applies to the installation of piggybacks. Serious electrical shock hazards can exist during all installation, repair, and maintenance operations on this product. Therefore, always unplug the power cable and any other cables which provide external voltages before performing any work on this product.

Earth ground connection to vehicle's chassis or a central grounding point shall remain connected. The earth ground cable shall be the last cable to be disconnected or the first cable to be connected when performing installation or removal procedures on this product.

Special Handling and Unpacking Instruction

NOTICE

ESD Sensitive Device!

Electronic boards and their components are sensitive to static electricity. Therefore, care must be taken during all handling operations and inspections of this product, in order to ensure product integrity at all times.

Do not handle this product out of its protective enclosure while it is not used for operational purposes unless it is otherwise protected.

Whenever possible, unpack or pack this product only at EOS/ESD safe work stations. Where a safe work station is not guaranteed, it is important for the user to be electrically discharged before touching the product with his/her hands or tools. This is most easily done by touching a metal part of your system housing.

It is particularly important to observe standard anti-static precautions when changing piggybacks, ROM devices, jumper settings etc. If the product contains batteries for RTC or memory backup, ensure that the product is not placed on conductive surfaces, including anti-static plastics or sponges. They can cause short circuits and damage the batteries or conductive circuits on the product.

Lithium Battery Precautions

If your product is equipped with a lithium battery, take the following precautions when replacing the battery.

CAUTION

Danger of explosion if the battery is replaced incorrectly.

Replace only with same or equivalent battery type recommended by the manufacturer.

Dispose of used batteries according to the manufacturer's instructions.

General Instructions on Usage

In order to maintain Kontron's product warranty, this product must not be altered or modified in any way. Changes or modifications to the product, that are not explicitly approved by Kontron and described in this User Guide or received from Kontron's Technical Support as a special handling instruction, will void your warranty.

This product should only be installed in or connected to systems that fulfill all necessary technical and specific environmental requirements. This also applies to the operational temperature range of the specific board version, that must not be exceeded. If batteries are present, their temperature restrictions must be taken into account.

In performing all necessary installation and application operations, only follow the instructions supplied by the present User Guide.

Keep all the original packaging material for future storage or warranty shipments. If it is necessary to store or ship the product then re-pack it in the same manner as it was delivered.

Special care is necessary when handling or unpacking the product. See Special Handling and Unpacking Instruction.

Environmental Protection Statement

This product has been manufactured to satisfy environmental protection requirements where possible. Many of the components used (structural parts, printed circuit boards, connectors, batteries, etc.) are capable of being recycled.

Final disposition of this product after its service life must be accomplished in accordance with applicable country, state, or local laws or regulations.

Environmental protection is a high priority with Kontron.

Kontron follows the WEEE directive

You are encouraged to return our products for proper disposal.

The Waste Electrical and Electronic Equipment (WEEE) Directive aims to:

- ▶ Reduce waste arising from electrical and electronic equipment (EEE)
- ▶ Make producers of EEE responsible for the environmental impact of their products, especially when the product become waste
- ▶ Encourage separate collection and subsequent treatment, reuse, recovery, recycling and sound environmental disposal of EEE
- ▶ Improve the environmental performance of all those involved during the lifecycle of EEE

1/ Introduction

This manual describes the Smart Mobility ARChitecture SMARC Eval-Carrier-2.1 board. This document describes the electronic, mechanical and thermal design of the SMARC evaluation carrierboard. It is designed for the testing of SMARC-sXEL, SMARC_SAL28 and other SMARC 2.1 modules. The board will be equipped with DP++ connector, HDMI connector, LVDS connector, two full-size or half-size mPCIe card slot (PCIe + USB 2.0) and two PCIe x1 slot to easily use and test additional cards.

The use of this Users Guide implies a basic knowledge of PC hard- and software. This manual is focussed on describing the special features and is not intended to be a standard PC textbook. New users are recommended to study the short installation procedure stated in the following chapter before switching on the power. All configuration and setup of the CPU board is either done automatically or manually by the user via the BIOS setup menus. Latest revision of this manual, datasheet, BIOS, drivers and BSP's (Board Support Packages) can be downloaded from Kontron Web Page.

2/ Description

The SMARC Eval-Carrier-2.1 is designed on the latest SMARC 2.1.1 specification. The board will be equipped with

- ▶ DP++ connector,
- ▶ HDMI connector,
- ▶ LVDS connector,
- ▶ eDP connector,
- ▶ two mPCIe card slot (PCIe + USB 2.0), both with optional connection to MDIO for SERDES use case
- ▶ two PCIe x1 slot,
- ▶ two USB 3.0 connectors one USB 2.0 OTG connector,
- ▶ SATA connector
- ▶ SIM card slot,
- ▶ Battery holder and super cap
- ▶ Camera interface,
- ▶ CAN interface,
- ▶ two Ethernet connectors,
- ▶ HDA and I2S audio codec,
- ▶ one USB 2.0 connector,
- ▶ μ SD connector,
- ▶ 4x COM ports.

Figure 1: Carrier board with SMARC interface

3/ Installation procedure

3.1. Packing Check List

The package includes the following basic items accompany with this manual.

- ▶ One board

If this item is damaged or missed, please contact your vendor and save all packing materials for future replacement and maintenance.

Note: The above packing list is for standard single box packing only.

3.2. Requirements IEC60950-1

Take care when designing chassis interface connectors in order to fulfil the IEC60950-1 standard.

Users of board must evaluate the end product to ensure compliance the requirements of the IEC60950-1 safety standard are met:

The motherboard must be installed in a suitable mechanical, electrical and fire enclosure.

The system in its enclosure must be evaluated for temperature and air flow considerations.

For interfaces having a power pin such as external power or fan, ensure that the connectors and wires are suitably rated. All connections from or to the product shall be with Safety Extra Low Voltage (SELV) circuits only.

Wires have suitable rating to withstand the maximum available power.

The enclosure of the peripheral device fulfills the fire protecting requirements of IEC60950-1.

4/ System specifications

4.1. Component Main Data

The table below summarizes the features of the motherboard.

Table 1: Component Main Data

SMARC Eval-Carrier-2.1	
Form factor	Testing Hardware with 210 mm x 200 mm, max. thickness 3 mm
Memory	
EEPROM System (U78)	The EEPROM type 24LC64 on carrier board connected to SMARC I2C_PM bus.
SPI flash socket (J48) (J64)	SPI flash socket (SOIC8 and WSON7)
EEPROM DDC optional (U72)	The EDID EEPROM type 24C04 on carrier board connected to LVDS_I2C bus. Holding display relevant DDC information. Used by BIOS to initialize LCD. KEAPI support with module.
External I/O	
LAN	2x Gbit-Ethernet ports
USB	1x USB Type C, 1x USB 3.0 Type A, 1x USB 2.0 Type A, 1x micro USB OTG
HDMI	HDMI connector from SMARC module
DP++	DP++ Display port connector from SMARC module
COM1-4	4x COM RS232, 9-pin DSUB
Camera interfaces	Two Camera Header for cameras, including power, GPIO, I2C. Recommended Power should be 3.3 V, fused with 0.75 A resettable fuse.
Audio	Line-in and line-out 3.5mm jack; Front Panel 2x5 Pin Header (2.54mm), supporting both interfaces I2S and HDA selectable by jumper. On audio header is also Microphone and Headphone output.
Internal I/O	
LVDS	40-pin LVDS dual channel connector
Backlight	Backlight PWM and power. Configurable 12 V/ 5 V voltage levels of backlight power for different panels via jumper. Maximum Power is 12 W continuous. If the selected panel exceeds, the provided power by this carrier evaluation of the SMARC module with LVDS can still be done with external panel power.
eDP	40-pin eDP connector; configurable 3.3/5V levels of power via jumper, maximum current capability of 1A load
SATA	SATA port with SATA power connector
PCIe X1	two PCIe 1X slots
mPCIe	two card slots (full size/half size) - PCIe & USB; support all MC3 mPCIe cards
SIM Card	SIM Card connected to both mPCIe
μSD	microSD card socket from SMARC module
Controller Area Network (CAN)	two CAN interfaces
LEDs	SMD LEDs for storage activity, board status, LVDS/eDP backlight, device and power status (power good)
Internal Header and Jumper	
GPIO	GPIO Header 2.54 mm
eSPI header	eSPI header (2.54 mm pin header, dual row)

Power Management Header	2.54 mm pin header, dual row
Battery	1.5F Goldcap and/or CR2032 battery. Optional parallel usage supported.
Fan	4-pin fan connector, Voltage can be 5 V or 12 V (default)
Carrier Board Controllers	
I2C EEPROM	General purpose EEPROM I2C
SPI Socket	WSON socket (32MB) and SOIC8 socket (16MB) flash
HDA Codec	TSI 92HD73D HDA Codec
I2S Codec	WM8904 I2S Codec
EEPROM DDC	Holding display relevant DDC information. Used by BIOS to initialize LCD.
Carrier Board Power	
Power input	12 V input power connector, used as an alternative power for module to support wide voltage range. 12 V DC power connector for powering carrier and module 5 V. Separate input power connector for module with voltage range: 3.0 V to 5.25 V DC
LED status	
Power LEDs	Power good of carrier power lanes
CARRIER_PWR_ON	Power on
CARRIER_STB#	CARRIER_STB#
SATA_ACT#	SATA activity LED
LVDS / eDP Backlight	Indication of LVDS / eDP backlight
Power rails	1.8 V; 3.3 V; 5 V
GPIO	GPIO indication LEDs
Watchdog	Watchdog indication LED

⚠ CAUTION

Danger of explosion if the lithium battery is incorrectly replaced.

- Replace only with the same or equivalent type recommended by the manufacturer
 - Dispose of used batteries according to the manufacturer's instructions
-

Table 2: Environmental Conditions

Operating	0°C to +70°C Some connectors and supercap has operating temperature only 0°C to +70°C, relative humidity (non-condensing) 10 % to 93 % at 40°C
Storage	-40°C to +85°C relative humidity (non-condensing) 10 % to 95 % at 40°C
Electromagnetic Compatibility (EMC) and Interference (EMI)	The board shall be designed to meet the following requirements: EMC Emission EN 55022 Class B, FCC CFR part 15 Class B
Shock/Vibration/Bump	Shock & Vibration according to IEC/EN60068-2-6 and IEC/EN60068-2-27
Theoretical MTBF	not applicable
Restriction of Hazardous Substances (RoHS) II Compliance	RoHS II compliant
Safety	The board shall be designed to meet the following requirements: <ul style="list-style-type: none"> ▶ UL 60950, 3rd edition (US and Canada) ▶ EN 60950-1 (Europe)

5/ Jumpers and Connectors

5.1. Hardware Configuration Setting

This chapter gives the definitions and shows the positions of jumpers, headers and connectors. All of the configuration jumpers on the board are in the proper position. The default settings shipped from factory are marked with an asterisk (*).

In general, jumpers on the board are used to select options for certain features. Some of the jumpers are designed to be user-configurable, allowing for system enhancement. The others are for testing purpose only and should not be altered. To select any option, cover the jumper cap over (SHORT) or remove (NC) it from the jumper pins according to the following instructions. Here, NC stands for "Not Connect".

5.1.1. Jumpers and Connectors

Table 3: Jumpers and Connectors

Connector	Function	Remark
High current jumper (H8 with contacts J55, J56 and J57)	Module power selection: Either internal power via J53 (5 V supply), or external via J54 (3 to 5.25 V supply). ATTENTION: J54 powers the module ONLY! Carrier still needs to be powered via 12V, through J53.	1x3-pin Jumper
5 V/3.3 V (J4)	Display voltage selection (3.3 V or 5 V)	1x3-pin Jumper
5 V/12 V (J23)	Display backlight voltage selection (5 V or 12 V)	1x3-pin Jumper
A_W_Disable_1 (J49)	Disable miniPCIe radio operation	1x2-pin Jumper
A_W_Disable_2 (J50)	Disable miniPCIe radio operation	1x2-pin Jumper
B_W_Disable_1 (J51)	Disable miniPCIe radio operation	1x2-pin Jumper
B_W_Disable_2 (J52)	Disable miniPCIe radio operation	1x2-pin Jumper
CODEK_OPTION_SW_I2S_HDA# (J31)	Audio Codec Multipexor HDA (default)/I2S Codec	1x2-pin Jumper
LEDs ENABLE (J44)	Enable/Disable status and power LEDs	1x2-pin Jumper
V_BAT_JP (J58)	Selection between Battery or Goldcap	1x3-pin Jumper
SMARC (J1)	SMARC connector	1x314-connector
LVDS/eDP (J3)	LVDS dual channel. From SMARC module. Configurable 3.3 V/5 V voltage levels of power for different panels via jumper.	
HDMI (J42)	HDMI connector from SMARC module	
DP++ (J12)	Display port connector from SMARC module	
PCIe x1 (J2/J5)	2x PCIe 1x slot	standard
mPCIe (J13/J20)	2x card slot (full size/half size) - PCIe & USB; support all MC3 mPCIe cards	standard
SATA (J22)	1x connector	standard
Audio (J24 IN/J43 OUT)	Line-in and line-out 3.5mm jack; Front Panel 2x5 Pin Header (2.54mm)	2x5 header
CAN (J6/J7)	2x CAN, Molex 53261-0471 or similar	1x4 header
Power Management Header (J45)	SYS-Signals Header (2.54mm pin header)	2x8 header
SD Card (J9)	SD card write protect setting	

Connector	Function	Remark
Fan (J62)	Fan	1x4 header
GPIO (J38, U33, U34, U35,U11)	GPIO Header 2.54mm	2x8 header
GP I2C/MDIO (J65)	GP I2C/MDIO 2.54mm	2x3 header

6/ Technical Drawings

6.1. Block Diagram

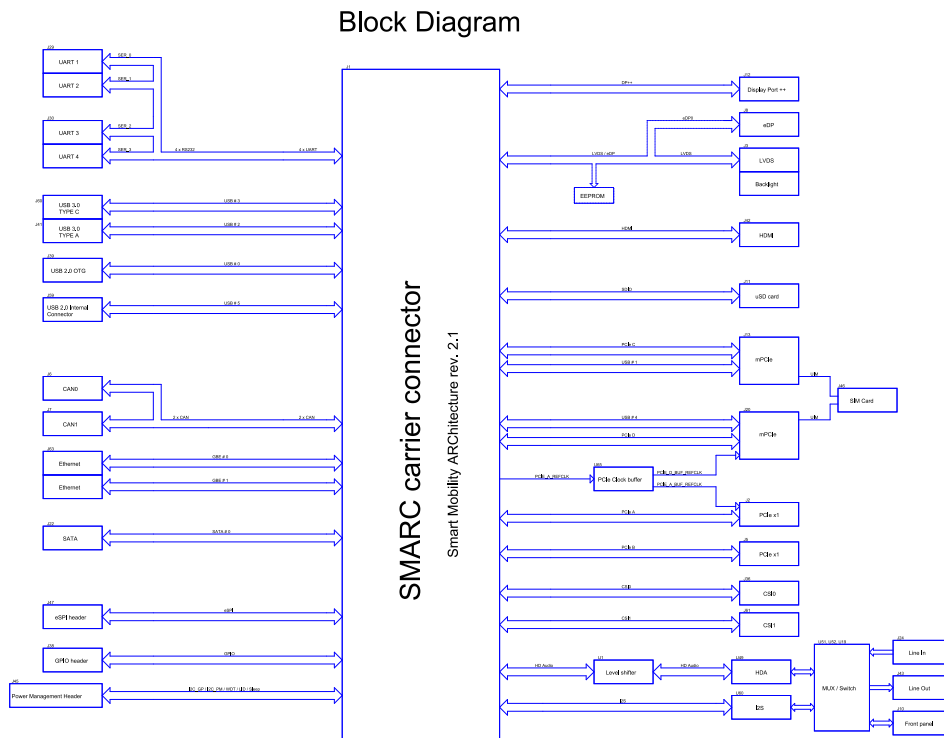

Figure 8: Block Diagram for the SMARC Eval-Carrier-2.1

NOTICE

There are two different ways to power the carrier and module:

- ▶ **Default and recommended:** Power Connector J53 or J66 with 12 V, which also delivers 5 V to the module and 12 V to the board. Jumper V_MOD must be on position INT.

Figure 9: Red Jumper on position INT

- ▶ **Alternative:** Power Connector J53 or J66 with 12 V for the board and Power Connector J53 with 3.0 – 5.25 V, which delivers power separately to module. Jumper V_MOD must be on position EXT.

Yellow	MPCIEB_WLAN#	D42	WLAN Activity
Yellow	MPCIEB_WWAN#	D36	WWAN Activity

8/ Pin Definitions

The following sections provide pin definitions and detailed description of all on-board connectors. The connector definitions follow the following notation:

Table 12: Connector Definitions

Column Name	Description
Pin	Shows the pin-numbers in the connector. The graphical layout of the connector definition tables is made similar to the physical connectors.
Signal	The mnemonic name of the signal at the current pin. The notation "XX#" states that the signal "XX" is active low.
Type	AI: Analog Input AO: Analog Output I: Input, TTL compatible if nothing else stated IO: Input/Output, TTL compatible if nothing else stated IOT: Bi-directional tristate IO pin. IS: Schmitt-trigger input, TTL compatible. IOC: Input/open-collector Output, TTL compatible IOD: Input/Output, CMOS level Schmitt-triggered (Open drain output) NC: Not Connected O: Output, TTL compatible OC: Output, open-collector or open-drain, TTL compatible OT: Output with tri-state capability, TTL compatible LVDS: Low Voltage Differential Signal PWR: Power supply or ground reference pins.
	Ioh: Typical current in mA flowing out of an output pin through a grounded load, while the output voltage is > 2.4 V DC (if nothing else stated). Iol: Typical current in mA flowing into an output pin from a VCC connected load, while the output voltage is < 0.4 V DC (if nothing else stated).
Pull U/D	On-board pull-up or pull-down resistors on input pins or open-collector output pins.
Note	Special remarks concerning the signal
Designation	Type and number of item described

8.1. SMARC Connector (J1)

The SMARC connector has different pins on both sides:

- ▶ Top side: 74 pins are on the left side, 82 pins on the right side
- ▶ Bottom side: 75 pins are on the left side, 83 pins on the right side

Figure 14: 314-pin SMARC Connector for SMARC-Interface

8.2. LVDS Connector (J3)

This connector provides data and power connection between Carrier Board and Display. This 40-pin lockable connector contains the LVDS output signals and the power to the LVDS display.

Figure 15: 40-pin LVDS connector

Table 14: LVDS connector

Pin	Signal	Description
1	LVDS_BKLT_CTRL	LVDS Backlight Control (PWM)
2	LVDS_A0-	LVDS odd channel 0, minus signal
3	LVDS_A0+	LVDS odd channel 0, plus signal
4	LVDS_VDD_EN	LVDS VDD enable signal
5	LVDS_A1-	LVDS odd channel 1, minus signal
6	LVDS_A1+	LVDS odd channel 1, plus signal
7	NC	Ground
8	LVDS_A2-	LVDS odd channel 2, minus signal
9	LVDS_A2+	LVDS odd channel 2, plus signal
10	GND	Ground

Table 30: Signal Description

Signal	Description
USBn+ USBn- RXn+ RXn- TXn+ TXn-	Differential pair works as serial differential receive/transmit data lines. (n= 0,1,2,3)
5 V/SB5 V	5 V supply for external devices. SB5 V is supplied during power-down to allow wakeup on USB device activity. Power is maximum 1A for each USB 3.0 port (protected with 1A load switch for each port).

For HiSpeed rates it is required to use a USB cable, which is specified in USB2.0 standard:

Figure 29: USB 2.0 High Speed Cable

For SuperSpeed rates it is required to use a USB cable, which is specified in USB3.0 standard:

Figure 30: USB 3.0 High Speed Cable

8.28. Fan Connector (J62)

Figure 41: 4-pin Fan Connector

Table 47: Fan Connector

Pin	Signal	Description
1	GND	
2	V_50_FAN	12 V by default. Can optionally be changed to 5 V, via removing FB69 and populating FB68.
3	FAN_TACH_J	FAN-Tacho signal
4	FAN_PWMOUT_J	PWM output for FAN control

8.29. Power-In Connector (J53)

Figure 42: Power-In Connector

Table 43: Power-In Connector

Pin	Signal	Description
1	V_12V0_IN_CON	Main power input for either both module and carrier (default), or for carrier only, when J54 is used.
2	GND	

⚠ CAUTION

The board can be supplied via the AC/DC adapter plugged into the power jack. Such adapters have usually no connection to protective earth. Consequently, the potential of the conductive parts on the board may drift. If a human touches such a part, this may lead to an electric shock. The board must be grounded separately, if the unit is supplied via power jack.

8.30. Alternative Power-In Connector (J66)

Figure 44: Alternative Power-In Connector

Table 45: Module Power-In Connector

Pin	Signal	Description
1	GND	Main power input for either both module and carrier (default), or for carrier only, when J54 is used.
2	GND	
3	V_12V0_IN_CON	Not connected
4	V_12V0_IN_CON	

8.31. Module Power-In Connector (J54)

Figure 46: Module Power-In Connector

Table 47: Module Power-In Connector

Pin	Signal	Description
1	V_MODULE	Module Power from 3.0 V to 5.25 V is independent from Carrier power.
2	GND	
3	V_MODULE	Module Power from 3.0 V to 5.25 V is independent from Carrier power.
4	GND	

NOTICE

There are two different ways to power the carrier and module:

- ▶ **Default and recommended:** Power Connector J53 or alternatively J66 with 12 V, which also delivers 5 V to the module and 12 V to the board. Jumper V_MOD must be on position INT.

Figure 48: Red Jumper on position INT

- ▶ **Alternative:** Power Connector J53 with 12 V and Power Connector J54 with 5 V, which delivers power separately to the board (12 V) and module. Jumper V_MOD must be on position EXT.

NOTICE

If any of the supply voltages drops below the allowed operating level longer than the specified hold-up time, all the supply voltages should be shut down and left OFF for a time long enough to allow the internal board voltages to discharge sufficiently. If the OFF time is not observed, parts of the board or attached peripherals may work incorrectly or even suffer a reduction of MTBF. The minimum OFF time depends on the implemented PSU model and other electrical factors and needs to be measured individually for each case.

8.32. Button Switch

8.33. Boot Selection Jumpers (J28, J32, J33) and other Jumpers

There are three Jumpers for Boot Select according to the SMARC 2.0 specification.

Figure 50: Jumpers for Boot Select

Table 51: Boot Selection Jumpers

	Carrier Connection			Boot Source
	BOOT_SEL2# (J33)	BOOT_SEL1# (J32)	BOOT_SEL0# (J28)	
1	GND	GND	GND	Carrier SATA
2	GND	GND	Float	Carrier SD Card
3	GND	Float	GND	Carrier eSPI (ESPI_CS0#)
4	GND	Float	Float	Carrier SPI (SPI0_CS0#)
5	Float	GND	GND	Module device (NAND, NOR) – vendor specific
6	Float	GND	Float	Remote boot (GBE, serial) – vendor specific
7	Float	Float	GND	Module eMMC Flash

Boot options for the SMARC-sXAL (BOOT_SEL2#):

Only boot from module BIOS or carrier BIOS are supported, no other boot options are supported.

- ▶ To boot from module, remove shunt jumper on J33 (BOOT_SEL2#) of SMARC-Eval-Carrier-2.
 - ▶ To boot from carrier, place shunt jumper on J33 (BOOT_SEL2#) of SMARC-Eval-Carrier-2.
-

Table 52: Display Power Select Jumper (J4)

Jumper Position	Function description
1-2	LVDS panel power (V_5V0_3V3_S0 pins 28-30) is 5.0V
2-3 (Default)	LVDS panel power (V_5V0_3V3_S0 pins 28-30) is 3.3V

Table 53: Backlight Power Select Jumper (J23)

Jumper Position	Function description
1-2	Backlight power (V_BKLT) is 5.0V
2-3 (Default)	Backlight power (V_BKLT) is 12V

Table 54: LID Jumper (J34)

Jumper Position	Function description
Open (Default)	LID Inactive
Close	LID Active

Table 55: TEST Jumper (J35)

Jumper Position	Function description
Open (Default)	TEST# not active
Close	TEST# active

Table 56: LEDs Enable Jumper (J44)

Jumper Position	Function description
Open (Default)	LEDs not active
Close	LEDs active

Table 57: RESET Jumper (J25)

Jumper Position	Function description
Open (Default)	Reset Signal Inactive
Close	Reset Signal Active

Table 58: Power Jumper (J26)

Jumper Position	Function description
Open (Default)	Power Signal Inactive
Close	Power Signal Active

Table 59: Force Recovery Jumper (J27)

Jumper Position	Function description
Open (Default)	Regular boot
Close	Force Recovery

Figure 51: Module Power Select Jumper (J55, J56, J57)

Table 60: Module Power Select Jumper (J55, J56, J57)

Jumper Position	Function description
J56 - J57 (Default)	SMARC module powered from carrier by 5 V power
J56 – J55	SMARC module powered from external connector J54

Table 61: Audio Channel Jumper for I2S or HDA (J31)

Jumper Position	Function description
Open (Default)	HDA Codec Active
Close	I2S Codec Active

NOTICE Jumper J31 should not be changed when power is present.

Table 62: mPCIe-1WLAN Disable Jumper (J49, J50)

Jumper Position	Function description
Open (Default)	WLAN in mPCIe slot J13 active
Close	WLAN in mPCIe slot J13 inactive

Table 63: mPCIe-1WLAN Disable Jumper (J51, J52)

Jumper Position	Function description
Open (Default)	WLAN in mPCIe slot J13 active
Close	WLAN in mPCIe slot J13 inactive

Figure 52: RTC Jumper (J58)

Table 64: RTC Jumper (J58)

Jumper Position	Function description
1-2 (Default)	Module RTC is powered from battery (J37)
2-3	Module RTC is powered from super cap (C364)

9/ Technical Support

For technical support contact our Support department:

E-mail: support@kontron.com

Phone: +49-821-4086-888

Make sure you have the following information available when you call:

Product ID Number (PN),

Serial Number (SN)

The serial number can be found on the Type Label, located on the product's rear side.

Be ready to explain the nature of your problem to the service technician.

9.1. Warranty

Due to their limited service life, parts that by their nature are subject to a particularly high degree of wear (wearing parts) are excluded from the warranty beyond that provided by law. This applies to the CMOS battery, for example.

If there is a protection label on your product, then the warranty is lost if the product is opened.

9.2. Returning Defective Merchandise

All equipment returned to Kontron must have a Return of Material Authorization (RMA) number assigned exclusively by Kontron. Kontron cannot be held responsible for any loss or damage caused to the equipment received without an RMA number. The buyer accepts responsibility for all freight charges for the return of goods to Kontron's designated facility. Kontron will pay the return freight charges back to the buyer's location in the event that the equipment is repaired or replaced within the stipulated warranty period. Follow these steps before returning any product to Kontron.

1. Visit the RMA Information website:
<http://www.kontron.com/support-and-services/support/rma-information>

Download the RMA Request sheet for **Kontron Europe GmbH** and fill out the form. Take care to include a short detailed description of the observed problem or failure and to include the product identification Information (Name of product, Product number and Serial number). If a delivery includes more than one product, fill out the above information in the RMA Request form for each product.

2. Send the completed RMA-Request form to the fax or email address given below at Kontron Europe GmbH. Kontron will provide an RMA-Number.

Kontron Europe GmbH
RMA Support
Phone: +49 (0) 821 4086-0
Fax: +49 (0) 821 4086 111
Email: service@kontron.com

3. The goods for repair must be packed properly for shipping, considering shock and ESD protection.

Goods returned to Kontron Europe GmbH in non-proper packaging will be considered as customer caused faults and cannot be accepted as warranty repairs.

4. Include the RMA-Number with the shipping paperwork and send the product to the delivery address provided in the RMA form or received from Kontron RMA Support.

List of Acronyms

ATA	Advanced Technology Attachment
COM	Serial Communication Port
DP	DisplayPort
EC	Embedded Controller
EEPROM	Electrically Erasable Programmable Read Only Memory
ESD	Electro Static Discharge
Flash	Non-Volatile Memory
FPGA	Field Programmable Gate Array
Gold Flash Plating	Very thin gold plating (e.g. on contacts)
I/O	Input/Output
I2C	Inter IC bus (IIC or I2C)
JTAG	Joint Test Action Group, is a debug and programming port
LED	Light Emitting Diode
NC	Not connected
PCB	Printed Circuit Board
PCIe	Peripheral Component Interconnect Express
PHY	Physical Layer (IC)
PU	Pull-up
RS-232	Recommended Standard 232
RTC	Real Time Clock
SATA	Serial ATA
SMARC	Smart Mobility ARChitecture
SPI	Serial Peripheral Interface
SSD	Solid State Drive
TTL	Transistor-Transistor-Logic
UART	Universal Asynchronous Receiver and Transmitter
USB	Universal Serial Bus
VGA	Video Graphics Array: analog graphic output
VHDL	Very high speed integrated circuit Hardware Description Language
VRM	Voltage Regulator Module

About Kontron – Member of the S&T Group

Kontron is a global leader in Embedded Computing Technology (ECT). As a part of technology group S&T, Kontron offers a combined portfolio of secure hardware, middleware and services for Internet of Things (IoT) and Industry 4.0 applications. With its standard products and tailor-made solutions based on highly reliable state-of-the-art embedded technologies, Kontron provides secure and innovative applications for a variety of industries. As a result, customers benefit from accelerated time-to-market, reduced total cost of ownership, product longevity and the best fully integrated applications overall.
